Emergency response to a motor vehicle transportation spill

Assessment of residual fluids within a storage tank during a Hazardous Materials Assessment of a decommissioned marine platform

Field staff collecting a sediment sample for metals analysis

The SAR team consists of 24 environmental site professionals with extensive experience working with site owners, insurers, government agencies, and developers to help assess, remediate, and manage contamination that may impact human health and the environment. This includes impacts to soil, groundwater, sediment, surface water, and air quality as well as risks associated with hazardous building materials. Strum takes pride in offering the most effective and efficient solutions to address our client's needs and objectives, ensuring that regulatory compliance is met.

Recent projects include numerous Hurricane Fiona emergency spill responses, Tantallon wildfires domestic oil spills, Phased ESA's, hazardous materials assessments, and transportation emergency responses and remediation.
